By John Doe | **Copenhagen**

CONTOSO CITY — Contoso Electronics today introduced its latest laptop, the **Contoso Aero**, positioning the new model as a portable work-and-study machine that blends a slimmer chassis with performance upgrades, modern connectivity, and enhanced built-in security.

Designed for the commute—and the couch

Built around a new lightweight frame, the Contoso Aero is aimed at users who split time between offices, classrooms, and home. Contoso says the redesigned cooling system allows the laptop to sustain performance during long video calls, multitasking, and creative workloads while keeping fan noise to a minimum.

“We built Aero for the way people actually work now—moving between spaces and expecting their laptop to keep up,” said **Linda Carlyle**, **Chief of R&D** at Contoso Electronics. “It’s thin, durable, and tuned for responsiveness from the first login to the last meeting of the day.”

Contoso Aero at a glance

- **Display: 15" 2880 x 1920 (120Hz optional)**
- **Processor: [CPU options]**
- **Memory & storage: Up to [RAM]GB / Up to 2TB**
- **Battery: Up to 20 hours (claimed)**
- **Ports: USB-C/USB-A/HDMI/Audio/SD**
- **Wireless: Wi-Fi, Bluetooth**
- **Security: Fingerprint/IR camera/TPM, privacy shutter**
- **Weight: Starting at 1.1 kg**

Security and AI features move to the foreground

Alongside core performance updates, Contoso emphasized features meant to reduce day-to-day friction: faster wake-from-sleep behavior, improved webcam and microphone processing for calls, and a security stack designed to protect credentials and sensitive files. The company said Aero will support modern management and authentication options commonly used in business and education deployments.

Pricing and availability

Contoso Electronics said the Contoso Aero will be available starting **this holidayseason** through **Retail channels, contoso-electronics.com and partners**. Pricing will begin at **1,399 USD**, with additional configurations expected to scale based on processor, memory, storage, and display options.

The launch comes as laptop makers compete on thinner designs and smarter collaboration features, especially for hybrid work. Contoso said it focused on reliability and serviceability as much as headline specs, including simplified repair access for common components in select configurations.

“Performance matters, but so does what happens after purchase,” said **Linda Carlyle**, **Chief of R&D**. “Aero is designed to be supported and managed at scale—and to stay in use longer.”

About Contoso Electronics

Contoso Electronics is a consumer and commercial technology company that designs PCs, accessories, and services for work, learning, and entertainment. For more information, visit **contoso-electronics.com** and follow **@contosoelectronics**.
